Part A: Contracts Law Question (20 marks)

Emily, a 52-year-old widow with limited English proficiency, has recently become more involved in her community group. She regularly attends the local community centre and often discusses personal matters with Coordinator Mark, the centre's manager. Emily mentioned to him that she was considering selling her home and moving to a smaller unit. Coordinator Mark mentioned that a small property next to the community centre would soon be available, and that he was looking for a new place to live.

Emily immediately offered to sell her home to Mark for \$380,000, based on a neighbour's comment that a nearby property had sold for \$750,000 — not realising this was only half of its actual market value. Mark knew Emily was unlikely to reconsider once she had made a decision.

Meanwhile, Emily's 16-year-old daughter, Sophie, is a talented swimmer. Several contracts have been entered into:

1. Sports Management Agreement – Emily signed a three-year contract with Prime Sports Agency Pty Ltd, giving them exclusive rights to manage Sophie's sponsorships, endorsements, and competition entries.
2. Endorsement Agreement – Emily signed a two-year contract with WaveWear Swim Apparel Pty Ltd, under which Sophie must wear only WaveWear products. In return, Sophie receives free swim gear and annual payments of \$35,000. The contract provides that if Sophie breaches exclusivity, she must repay the value of the supplied equipment and pay additional damages.
3. Competition Entry Agreement – Sophie, without Emily's knowledge, signed a short-term agreement with the National Junior Swimming League to participate in its upcoming national competitions.

After one year, Emily and Sophie are dissatisfied with the Prime Sports and WaveWear agreements and wish to terminate them, claiming they are unfair and not in Sophie's best interests.

What legal rights do Emily and Sophie have to set aside or terminate the various agreements, and what factors will a court consider in determining whether those agreements are enforceable?

Issue

The key legal issues are whether Emily can rescind the sale of her home to Mark due to unconscionable conduct or equitable unfairness, and whether the contracts involving Sophie (a minor) are enforceable or can be terminated because of minority, parental authority, restraint, or unfair contractual terms. The court must determine whether these agreements are legally binding and whether equitable or statutory remedies apply.

Rule

A valid contract requires offer, acceptance, consideration, intention, capacity, and genuine consent (Holmes Institute 2026, Week 2, slide 5). Contracts may be set aside where consent is affected by unconscionable conduct, undue influence, or misleading conduct. Under equitable principles, unconscionable dealing arises where one party suffers from a special disadvantage and the stronger party knowingly exploits that disadvantage (Commercial Bank of Australia Ltd v Amadio (1983) 151 CLR 447). Limited English, emotional dependence, and unequal bargaining power may establish special disadvantage. Genuine consent is essential to enforceability (Holmes Institute 2026, Week 2, slides 5–8).

Minors generally lack full contractual capacity. Contracts for necessities or beneficial contracts of service may be enforceable, while contracts that are harsh or not for the minor's benefit may be voidable at the minor's option. Courts assess whether the agreement substantially benefits the minor's welfare, career, or education. Parents may enter contracts on behalf of minors, but such agreements remain subject to the child's best interests. Penalty clauses requiring excessive compensation may be unenforceable if they are punitive rather than a genuine pre-estimate of loss (Holmes Institute 2026, Week 3, slides 3–5).

Application

1. Emily's Home Sale to Mark

Emily offered to sell her home for \$380,000 based on a mistaken understanding of market value, believing \$750,000 represented full value when it was only half. Mark, as community coordinator and trusted confidant, was aware Emily relied on him and was unlikely to reconsider. Emily's limited English proficiency, emotional vulnerability as a widow, and trust relationship suggest a special disadvantage. Mark's knowledge and exploitation of this vulnerability strongly resemble the principles in Amadio (Commercial Bank of Australia Ltd v Amadio (1983) 151 CLR 447).

A court may find unconscionable conduct because Mark knowingly took advantage of Emily's misunderstanding for personal benefit. Equity may permit rescission because Emily's consent may not have been fully informed or genuinely independent. If Mark failed to correct Emily's mistake while benefiting from it, statutory remedies under the Australian Consumer Law may also be relevant (Holmes Institute 2026, Week 6, Consumer Protection slides). Therefore, Emily likely has strong grounds to set aside the property sale.

2. Prime Sports Management Agreement

Emily signed a three-year exclusive management agreement on Sophie's behalf. Since Sophie is a minor, the court will assess whether this is a beneficial contract of service. If Prime Sports genuinely promotes Sophie's swimming career through sponsorship and competition opportunities, it may be enforceable. However, if the exclusivity is excessive, restrictive, or primarily benefits the agency, the agreement may be voidable.

The three-year duration may be scrutinised as oppressive, especially if it limits Sophie's future opportunities. Courts will consider Sophie's welfare, professional advancement, and whether Emily understood the agreement's implications before signing. If the contract is not in Sophie's best interests, it may be set aside or terminated (Holmes Institute 2026, Week 2, slide 5).

3. WaveWear Endorsement Agreement

The WaveWear contract provides Sophie with free equipment and annual payments of \$35,000 in return for exclusivity. This may appear beneficial because it provides financial support and sporting sponsorship. However, courts will examine whether the exclusivity clause unreasonably restrains Sophie's commercial freedom.

The requirement to repay all equipment plus additional damages if Sophie breaches may constitute a penalty clause if disproportionate to actual loss. Under contract law, punitive clauses are often unenforceable. If the restraint is unreasonable or the obligations are not in Sophie's best interests, the contract or specific terms may be voidable (Holmes Institute 2026, Week 3, remedies slides).

4. National Junior Swimming League Agreement

Sophie independently entered into a short-term competition agreement without Emily's knowledge. Although minors generally have limited capacity, beneficial contracts for career advancement may be enforceable. Participation in national swimming competitions likely enhances Sophie's development and may therefore be considered beneficial.

Because this contract is short-term and directly related to Sophie's sporting career, it is more likely enforceable unless exploitative or unduly burdensome. Emily's lack of knowledge alone may not invalidate it.

Conclusion

Emily likely has strong legal grounds to rescind the home sale due to unconscionable conduct because Mark exploited her limited English, vulnerability, and trust.

For Sophie's agreements:

Prime Sports Agreement: Potentially voidable if excessively restrictive or not genuinely beneficial.

WaveWear Agreement: May be enforceable if beneficial, but exclusivity and penalty clauses may be struck down if unreasonable.

National Junior Swimming League Agreement: Likely enforceable if beneficial to Sophie's swimming career.

Overall, courts will consider contractual capacity, genuine consent, fairness, best interests of the minor, and whether stronger parties exploited weaker parties. Emily and Sophie's strongest legal protections arise from unconscionability principles, minor capacity rules, and limitations on unfair contractual penalties.

Part B: Negligence Law question (10 marks)

A group of accountants has recently established a professional partnership known as Carter Tax Solutions, specialising in Australian income tax advisory services. The firm provides tax planning and compliance advice to individual and business clients.

Mr. Ethan Walker, a client of the firm, approaches Carter Tax Solutions seeking professional advice on lawful ways to minimise his tax liability. After reviewing his financial circumstances, the firm provides detailed tax minimisation strategies. Relying on this advice, Ethan pays the agreed professional fee and implements the recommendations.

Subsequently, the Australian Taxation Office conducts an audit of Ethan's affairs and determines that the advice was based on an incorrect interpretation of relevant tax legislation. As a result, Ethan becomes liable to pay a substantial amount of unpaid tax, together with interest and penalties, totalling \$950,000. Ethan claims that he relied entirely on the professional advice provided by Carter Tax Solutions and would not have acted otherwise.

What legal liability, if any, does Carter Tax Solutions have to Ethan under the law of negligence, and what factors will a court consider in determining duty of care, breach, causation, and the appropriate remedies?

Issue

The legal issue is whether Carter Tax Solutions owed Ethan Walker a duty of care in providing professional tax advice, whether the firm breached that duty by giving incorrect advice, whether the breach caused Ethan's financial loss, and what remedies may be available under the law of negligence. Professional advisers owe clients a duty to exercise reasonable care and skill when providing services (Holmes Institute 2026, Week 6, slide 7).

Rule

Negligence arises where a person owes another a duty of care, breaches that duty, and causes reasonably foreseeable damage. A duty of care exists where harm is reasonably foreseeable and there is sufficient proximity between the parties (*Donoghue v Stevenson* [1932] AC 562). The law of negligence protects individuals from reasonably foreseeable harm caused by another party's failure to exercise reasonable care (Holmes Institute 2026, Week 6, slide 12).

Professionals such as accountants and tax advisers owe clients a duty to exercise reasonable skill, care, and competence when providing professional advice. In cases involving negligent professional advice causing economic loss, courts apply the principles established in *Hedley Byrne & Co Ltd v Heller & Partners Ltd* [1964] AC 465. A professional who gives advice in circumstances where reliance is foreseeable may be liable for pure economic loss if inaccurate advice causes financial damage.

A breach occurs where the defendant fails to meet the standard of care expected of a reasonable professional in that field. Courts consider professional expertise, industry standards, and whether a competent accountant would have interpreted the legislation correctly. The "reasonable person" standard is used to assess whether proper care was exercised (Holmes Institute 2026, Week 6, slide 14).

Causation requires proof that the plaintiff relied on the advice and suffered loss as a direct consequence. Courts apply the "but for" test to determine whether the damage would have occurred but for the defendant's negligence. Remedies in negligence primarily involve compensatory damages intended to restore the plaintiff to the position they would have been in had the negligence not occurred (Holmes Institute 2026, Week 6, slides 18–20).

Application

Carter Tax Solutions is a professional accounting partnership specialising in Australian income tax advisory services. Ethan approached the firm specifically seeking lawful tax minimisation advice. The firm reviewed his financial affairs and provided detailed recommendations in exchange for payment. This establishes a clear professional relationship and sufficient proximity between the parties. It was reasonably foreseeable that Ethan would rely on the advice when managing his taxation obligations. Accordingly, Carter Tax Solutions owed Ethan a duty of care to provide competent and accurate tax advice (*Hedley Byrne & Co Ltd v Heller & Partners Ltd* [1964] AC 465).

The firm may have breached that duty because the Australian Taxation Office later determined the advice was based on an incorrect interpretation of tax legislation. A court would assess whether a reasonably competent tax adviser exercising appropriate professional skill and diligence would have made the same mistake. Since Carter Tax Solutions represented itself as a specialist tax advisory firm, a higher professional standard would be expected. If the incorrect advice resulted from inadequate research, poor interpretation of legislation, or failure to exercise reasonable care, breach is likely established. Professional negligence principles require advisers to act competently and carefully when advising clients (Holmes Institute 2026, Week 6, slide 14).

Causation is also likely satisfied because Ethan relied entirely on the firm's advice in implementing the tax minimisation strategy. Ethan stated that he would not have acted differently had correct advice been given. Applying the "but for" test, but for the negligent advice, Ethan would not have incurred the liability for unpaid tax, interest, and penalties. The financial loss of \$950,000 was reasonably foreseeable because inaccurate tax advice commonly exposes clients to reassessment, penalties, and financial sanctions by the Australian Taxation Office.

However, the court may also examine whether Ethan contributed to his loss. If Ethan knowingly participated in unusually aggressive tax arrangements or failed to seek clarification regarding suspicious advice, contributory negligence may reduce the damages recoverable. Additionally, the court may distinguish between unpaid tax that Ethan legally owed regardless of the advice and additional penalties or interest directly resulting from the negligent advice. Generally, damages focus on losses caused by the negligence itself rather than lawful taxation obligations.

Conclusion

Carter Tax Solutions is likely liable to Ethan Walker for professional negligence. The firm owed Ethan a duty of care as professional tax advisers, breached that duty by providing incorrect tax advice, and caused foreseeable economic loss when Ethan relied on the advice and incurred substantial penalties and liabilities. Ethan will likely be entitled to compensatory damages for losses

directly resulting from the negligence, including penalties, interest, and potentially professional costs associated with the Australian Taxation Office audit.

Part C: Corporation Law Question (10 marks)

Arjun, Meera, and Tashi plan to establish a premium dessert business specialising in luxury event catering. Arjun and Meera each intend to invest \$15,000 but prefer not to be involved in daily operations, although they still want a say in major business decisions. Tashi has extensive culinary experience but lacks capital and will manage the day-to-day operations.

Meanwhile, Tashi's cousin, Rohan, offers to invest \$60,000 in the venture. He expects a regular financial return on his investment but does not wish to participate in management. However, he wants some level of control over how his funds are utilised.

The group seeks advice on the most suitable legal structure for their business and the legal implications of their chosen structure, particularly in relation to control, liability, and profit distribution.

What is the most appropriate business structure for this venture, and why is this structure preferable compared to other alternatives considering the parties' intentions regarding management, liability, and financial interests?

Issue

The legal issue is determining the most appropriate business structure for the premium dessert catering venture considering the parties' intentions regarding management participation, financial investment, liability exposure, and profit distribution. The structure must accommodate passive investors, active management by Tashi, and protection from personal liability.

Rule

Australian businesses may operate through several legal structures including sole traders, partnerships, trusts, and companies. Each structure differs regarding control, liability, ownership, and taxation. A company incorporated under the Corporations Act 2001 (Cth) is a separate legal entity distinct from its members (*Salomon v Salomon & Co Ltd* [1897] AC 22). Companies provide

limited liability protection, perpetual succession, and flexibility in ownership and management arrangements (Holmes Institute 2026, Week 7, slide 12).

Under the Corporations Act 2001 (Cth), shareholders own the company while directors manage its operations. Members' liability is generally limited to any unpaid amount on shares held (Holmes Institute 2026, Week 10, slide 10). A proprietary company (Pty Ltd) is commonly used by small businesses because it allows private ownership while limiting shareholder liability (Holmes Institute 2026, Week 10, slides 10–12).

Partnerships involve shared management and unlimited personal liability for business debts. Partners are jointly and severally liable for obligations incurred by the partnership. Sole trader structures provide complete control but expose the owner to unlimited liability. Trust structures may provide asset protection but are more complex and less suitable where multiple parties wish to exercise ownership and management rights directly.

Application

The most appropriate structure for this venture is likely a proprietary limited company (Pty Ltd). This structure best accommodates the differing intentions of Arjun, Meera, Tashi, and Rohan.

Arjun and Meera wish to invest capital and retain influence over major business decisions without being involved in daily operations. As shareholders, they can hold ownership interests and voting rights while appointing directors to manage the business. Their liability would generally be limited to their investment contribution, protecting their personal assets from company debts (Holmes Institute 2026, Week 7, slide 12).

Tashi intends to manage the daily operations and contribute culinary expertise rather than significant capital. Under a company structure, Tashi could be appointed as a director and manager of the business while also holding shares to reflect her operational contribution. This allows separation between ownership and management, which is a major advantage of incorporation (Holmes Institute 2026, Week 9, slide 3).

Rohan wishes to invest substantial funds and receive financial returns without active involvement in management. A company structure suits passive investors because shareholders may receive dividends without participating in day-to-day business activities. Rohan may negotiate shareholder rights or conditions in a shareholders' agreement to monitor how funds are used without becoming directly involved in management. This arrangement balances his desire for oversight with limited operational responsibility.

A partnership would be less appropriate because all partners generally share unlimited liability and management authority. This conflicts with Arjun's, Meera's, and Rohan's preference for limited involvement in operations. Additionally, partnership law may expose passive investors to liability

for business debts and actions of other partners. A sole trader structure would also be unsuitable because only one person could own the business and would bear unlimited liability personally. A company structure also provides advantages regarding continuity and future expansion. Since the company is a separate legal entity, it continues to exist regardless of changes in ownership or management (*Salomon v Salomon & Co Ltd* [1897] AC 22). This stability is beneficial for a growing luxury catering business that may later seek additional investors or commercial contracts.

Conclusion

The most appropriate business structure for the venture is a proprietary limited company (Pty Ltd). This structure is preferable because it provides limited liability protection, separates ownership from management, accommodates both active and passive investors, and allows flexible profit distribution through share ownership.

Arjun and Meera can remain passive investors while retaining voting rights, Tashi can manage daily operations as a director, and Rohan can invest capital and receive financial returns without assuming operational liability. Compared to partnerships or sole trader arrangements, a company structure better satisfies the parties' intentions regarding control, financial interests, and protection from personal liability.

Structured Communication Tools in Clinical Handover: Examining the Effectiveness of ISBAR/SBAR on patient safety and Information transfer.

Introduction

Clinical Handover is a high-risk communication event that transfers patient information, responsibility, and accountability among clinicians. Sharing communication is a key source of preventable adverse events and patient harm¹. To answer the PICO question, this essay examines whether using a structured communication approach, for example, ISBAR/SBAR², would enhance the accuracy, completeness, or safety of the information being passed on when there is a handover in healthcare situations (P), as compared with an unstructured or ad hoc handover (C). This summary will include evidence-based practice in the context of the wider picture of handover, the range of information sources that could be appropriate, consider information searching for AI, and critically analyse two pieces of evidence to consider for future clinical practice.

Evidence-Based Practice in Context

Evidence-based practice (EBP) is the process of combining the best available research evidence with clinical expertise and the patient's values to inform health care decisions. EBP is an integral part of clinical handover since handover is a critical point of vulnerability in the care process. Seamless access to patient information is crucial, but without the structured processes and

¹ <https://pmc.ncbi.nlm.nih.gov/articles/PMC6796291/>

² <https://pmc.ncbi.nlm.nih.gov/articles/PMC7712559/>

evidence-based information, it can be lost, misinterpreted, or simply not available – putting patients at direct risk of harm.³

Three key risks are related to poor communication of handovers. One is information omission—the failure of incoming clinicians to know of investigations that are imminent, declining observations, or medications that need to be given on time⁴. Secondly, verbal ‘miscommunication’ causes inaccuracies in the assessment of patient acuity, which can lead to a clinically inappropriate response⁵. Third, the accountability transfer is unclear, either because the outgoing clinician has not guaranteed his successor adequate responsibility or because the new clinician has not taken over the clear responsibility of his predecessor.⁶

The impact on patients' health is significant. The consequences of poor handover are a connection to clinical deterioration, medication errors, sentinel events and extension of hospital stay. It is a clinical and ethical obligation for a future health care professional to integrate EBP into practice when handing over tasks. For a future health care worker, it's a clinical and ethical obligation to transfer tasks into practice while incorporating EBP. Evidence-informed communication skills production by clinicians can lead to better communication with each other, fewer preventable harms, and a safer care environment.

Information Sources and Levels of Evidence

The PICO question can be answered using any of the three kinds of evidence: systematic reviews, randomised controlled trials (RCTs), and pre/post intervention studies.

The highest level of quantitative evidence is systematic reviews. They combine data from several high-quality primary source studies, which create general and far-reaching conclusions. The most robust evidence base for the effectiveness of ISBAR/SBAR in terms of accuracy, completeness of handover and patient safety outcomes could come from a systematic review of its effectiveness in healthcare settings.⁷

RCTs are in Tier Two. They randomly allocate the outcomes of structured and unstructured handover groups to minimise bias and maximise the reliability of the findings. RCTs are difficult

³ <https://pmc.ncbi.nlm.nih.gov/articles/PMC10450103/>

⁴ <http://pmc.ncbi.nlm.nih.gov/articles/PMC11214548/>

⁵ <https://pmc.ncbi.nlm.nih.gov/articles/PMC11131125/>

⁶ https://researchoutput.csu.edu.au/ws/portalfiles/portal/98184797/96294569_published_article.pdf

⁷ <https://pmc.ncbi.nlm.nih.gov/articles/PMC12702510/>

to logistically implement in a healthcare setting, but they are considered more valid than observational studies.⁸

Pre/post-intervention studies are found at the bottom of the list and are more frequently reported in quality improvement literature. They help clarify outcomes before and following implementation of a structured tool; vulnerable to confounding factors and lack of a true control group; however, based on real-world practice. This hierarchy makes sense for a quantitative PICO-type question asking about measurable safety outcomes, on which experimentation or quasi-experimentation would be the only method allowing for credible changes in practice.⁹

Search Methods

AI-Supported Search

A generative AI (GAI) tool was used to derive keywords and sources, as well as a reference list and levels of evidence for the PICO question. Key words suggested were "clinical handover," "SBAR," "ISBAR," "patient safety," "structured communication," and "information transfer." Recommended databases comprised PubMed, CINAHL and the Cochrane Library. The AI also came up with a list of eight sources in APA style to provide as references.

A comprehensive examination identified problems that needed attention. Suggested keywords were generally correct and matched the PICO components, but there were also keywords that we were not able to find via the databases and the DOI, as expected with an AI system¹⁰. There were several missing reference DOIs. In addition, levels of evidence were inconsistently reported, and one study from the group consisting of observational studies was mistakenly classified as systematic. The results suggest that the AI tools can indeed be useful for creating initial sets of search terminology, but cannot be depended on to produce 'academic' references for verification. The sources created with the use of AI cannot be used for EBP without independent verification; AI-created outputs should not replace structured academic database searching.¹¹

CINAHL Database Search

Boolean operators were used to conduct a structured search in the CINAHL: (SBAR OR ISBAR) AND (clinical handover OR nursing handover) AND (patient safety OR information transfer). The filters used were: peer-reviewed articles, English language and articles from the last 5 years. This

⁸ <https://www.sciencedirect.com/science/article/pii/S147751312400617X>

⁹ <https://pmc.ncbi.nlm.nih.gov/articles/PMC7919603/>

¹⁰ https://www.researchgate.net/publication/363011415_Research_Questions_with_PICO_A_Universal_Mnemonic

¹¹ <https://pmc.ncbi.nlm.nih.gov/articles/PMC12890228/>

resulted in 47 first results. Following the title and abstract screening, 12 articles were determined to be potentially relevant and six full articles were read with critical appraisal, with two of these sources being chosen.

Relevance resulted from the evaluation of contextualization of 4 PICO components: population (planned healthcare handover), intervention (ISBAR/SBAR), comparison (unstructured handover), and measurable outcome¹². Although the Internet has eliminated many of the traditional barriers to accessing information, searching within a database is still necessary for evidence-based practice, as academic databases such as CINAHL index approved, peer-reviewed publications with the ability to trace back to the original article. Applied filters help researchers to further narrow the results by study design, publication date and discipline, so that the evidence retrieved is current and is of good enough credibility and methodological fits. Database search is transparent, reproducible and can yield consistent academic sources that are appropriate for clinical application, whereas use of AI tools cannot.

Critical Appraisal and Evidence Application

The selected two articles were from two different levels of evidence from the CINAHL search. The first source is a systematic review appraised with the CASP Systematic Review Checklist on the association of SBAR communication with a change in patient safety outcomes in acute care settings. A great feature is that it includes studies from a variety of clinical settings, which promotes the generalizability of their findings. A limitation is that the studies included are heterogeneous, thus it may be hard to directly compare outcomes from various settings.¹³ This review is directly relevant to the PICO question; you can see its relevance in the fact that it synthesises evidence on structured communication tools and patient safety. So, its implications are easy to see; standardised handover processes minimise information loss, enhance clarity within the clinical team and facilitate a sense of accountability when a handover occurs. The "take away" from this lesson is that when faced with time pressure or not, being consistent and disciplined with ISBAR for every handover is key to maintaining patient safety.

The second source is a pre/post intervention study, in an emergency department, that measured the completeness of the handover before and after implementation of ISBAR, and appraised with the CASP Cohort Study Checklist. A strength is an objective measure of completeness – based on an

¹² <https://pmc.ncbi.nlm.nih.gov/articles/PMC12431931/>

¹³

https://www.researchgate.net/publication/396533266_Enhancing_patient_safety_outcomes_through_SBAR_communication_A_systematic_review

observational checklist – giving concrete data both before and after.¹⁴ A limitation is that the only site involved in the study of this design is limited to other situations in healthcare. It is highly pertinent to the field of Emergency nursing and Paramedicine, where patient transfers are often high in acuity and occur in a time-critical environment. Teamwork is important as both the outgoing and incoming clinicians are able to use the same framework to ensure that they enter into a shared understanding very quickly, providing a reduction in the cognitive load and minimising the risk of error. The point here is to make ISBAR automatic and then internalise it rather than relying on written guidelines as a reference. The important one to remember is to build up the muscle memory for how to use ISBAR, so that you don't have to refer to written instructions.

Conclusion

In this evidence summary, the value of structured communications, like ISBAR/SBAR, for improving the accuracy, completeness and safety of clinical communications has been carefully reviewed. To identify and apply credible evidence that supports this high-risk communication event, EBP serves as a foundation. While searching with an AI-assisted search made it obvious why the generative tools weren't the method for academic referencing, searching the CINAHL databases highlighted the advantage of using a rigorous and reproducible method. The critical appraisal exercise confirmed that there is evidence in support of using structured handover tools to improve safety. Implementing evidence-informed handover practices will still be a critical part of safe, patient-centred care for all health care professionals in the future.

Recipe of Chicken

Chicken is one of the most popular foods enjoyed all around the world. It is tasty, nutritious, affordable, and can be cooked in many different ways. Different countries and cultures have their own special chicken dishes. In Nepal and many South Asian countries, chicken curry is a favorite meal that is often eaten with rice, roti, or naan. Chicken is rich in protein and provides energy to the body. It is loved by children and adults alike because of its delicious flavor and soft texture. Preparing chicken is also considered an important cooking skill because it requires proper cleaning, seasoning, and cooking methods. A good chicken recipe not only satisfies hunger but also brings family members together during meals and celebrations.

One of the most famous and delicious chicken dishes is chicken curry. Chicken curry is made using chicken pieces, onions, tomatoes, spices, oil, garlic, ginger, and other ingredients. The recipe may vary from place to place, but the basic method remains similar. It is a flavorful and aromatic dish that can be prepared at home easily. Cooking chicken curry requires patience and attention because the spices must blend properly with the chicken to create a rich taste. A well-cooked chicken curry has tender chicken pieces and thick gravy filled with flavor.

To prepare chicken curry, several ingredients are needed. The main ingredient is fresh chicken, usually cut into medium-sized pieces. About one kilogram of chicken is enough for a family meal. Other ingredients include two chopped onions, two tomatoes, ginger paste, garlic paste, green chilies, turmeric powder, chili powder, coriander powder, cumin powder, salt, garam masala, cooking oil, and fresh coriander leaves for decoration. Some people also add yogurt, butter, or cream to make the curry richer and smoother. Potatoes can also be added for extra taste and texture. The first step in preparing chicken curry is cleaning the chicken properly. The chicken pieces should be washed carefully with clean water to remove dirt and unwanted smell. After washing, the water should be drained completely. Then the chicken can be marinated with salt, turmeric, ginger-garlic paste, and a little yogurt. Marination helps the chicken absorb flavor and become tender. It is best to leave the chicken for about thirty minutes before cooking.

Next, a cooking pan or pot is heated with oil. Once the oil becomes hot, chopped onions are added and fried until golden brown. This step is very important because browned onions give sweetness and rich flavor to the curry. After the onions are cooked, ginger paste, garlic paste, and green chilies are added. The mixture is stirred for a few minutes until a pleasant aroma comes out. Then chopped tomatoes are added and cooked until they become soft and blend with the spices.

After the tomatoes soften, different spices such as turmeric powder, chili powder, coriander powder, cumin powder, and salt are mixed into the masala. The spices should be cooked carefully on low heat so they do not burn. A little water may be added if the mixture becomes too dry. Cooking the

spices properly is important because it enhances the taste and color of the curry. The masala becomes thick and oily when it is fully cooked.

The marinated chicken pieces are then added into the pan. The chicken should be mixed well with the masala so that every piece is coated with spices. The chicken is cooked on medium heat for several minutes while stirring occasionally. Gradually, the chicken changes color and releases its own juice. This process allows the meat to absorb all the flavors of the spices. Some people fry the chicken for a longer time to achieve a deeper flavor.

After frying the chicken, water is added according to the desired consistency of the curry. If thick gravy is preferred, less water is added, while more water creates a thinner curry. The pot is then covered with a lid, and the chicken is allowed to cook slowly for about twenty to thirty minutes. During this time, the chicken becomes soft and tender. The curry also develops a rich aroma that makes everyone eager to eat.

When the chicken is fully cooked, garam masala is sprinkled on top for extra flavor. Fresh coriander leaves are also added as decoration. Some people squeeze a little lemon juice to give freshness to the dish. The chicken curry is now ready to be served. It is usually enjoyed hot with steamed rice, roti, naan, or chapati. The combination of spicy curry and warm rice creates a delicious and satisfying meal.

Chicken curry is not only delicious but also nutritious. Chicken contains protein, vitamins, and minerals that help build muscles and maintain good health. Garlic and ginger are also beneficial because they improve digestion and strengthen the immune system. However, too much oily or spicy food should not be eaten regularly because it may affect health negatively. Therefore, balanced cooking with moderate oil and spices is important.

Cooking chicken curry also teaches valuable life skills. It helps people learn patience, cleanliness, and responsibility in the kitchen. Preparing food for family members creates feelings of love and care. In many homes, cooking together becomes a joyful activity where family members share stories and laughter while preparing meals. Food has the power to connect people emotionally and culturally.

In conclusion, chicken curry is one of the most loved and flavorful dishes around the world. It is prepared using chicken, spices, onions, tomatoes, and other ingredients that blend together to create a rich and tasty curry. The cooking process involves cleaning, marinating, frying spices, and simmering the chicken until tender. Chicken curry is enjoyed with rice or bread and is suitable for daily meals as well as special occasions. Besides being delicious, it is also nutritious and comforting. Learning how to cook chicken curry is a useful skill that can bring happiness to both the cook and the people enjoying the meal.

Recipe of Chicken

Chicken is one of the most popular foods enjoyed all around the world. It is tasty, nutritious, affordable, and can be cooked in many different ways. Different countries and cultures have their own special chicken dishes. In Nepal and many South Asian countries, chicken curry is a favorite meal that is often eaten with rice, roti, or naan. Chicken is rich in protein and provides energy to the body. It is loved by children and adults alike because of its delicious flavor and soft texture. Preparing chicken is also considered an important cooking skill because it requires proper cleaning, seasoning, and cooking methods. A good chicken recipe not only satisfies hunger but also brings family members together during meals and celebrations.

One of the most famous and delicious chicken dishes is chicken curry. Chicken curry is made using chicken pieces, onions, tomatoes, spices, oil, garlic, ginger, and other ingredients. The recipe may vary from place to place, but the basic method remains similar. It is a flavorful and aromatic dish that can be prepared at home easily. Cooking chicken curry requires patience and attention because the spices must blend properly with the chicken to create a rich taste. A well-cooked chicken curry has tender chicken pieces and thick gravy filled with flavor.

To prepare chicken curry, several ingredients are needed. The main ingredient is fresh chicken, usually cut into medium-sized pieces. About one kilogram of chicken is enough for a family meal. Other ingredients include two chopped onions, two tomatoes, ginger paste, garlic paste, green chilies, turmeric powder, chili powder, coriander powder, cumin powder, salt, garam masala, cooking oil, and fresh coriander leaves for decoration. Some people also add yogurt, butter, or cream to make the curry richer and smoother. Potatoes can also be added for extra taste and texture. The first step in preparing chicken curry is cleaning the chicken properly. The chicken pieces should be washed carefully with clean water to remove dirt and unwanted smell. After washing, the water should be drained completely. Then the chicken can be marinated with salt, turmeric, ginger-garlic paste, and a little yogurt. Marination helps the chicken absorb flavor and become tender. It is best to leave the chicken for about thirty minutes before cooking.

Next, a cooking pan or pot is heated with oil. Once the oil becomes hot, chopped onions are added and fried until golden brown. This step is very important because browned onions give sweetness and rich flavor to the curry. After the onions are cooked, ginger paste, garlic paste, and green chilies are added. The mixture is stirred for a few minutes until a pleasant aroma comes out. Then chopped tomatoes are added and cooked until they become soft and blend with the spices.

After the tomatoes soften, different spices such as turmeric powder, chili powder, coriander powder, cumin powder, and salt are mixed into the masala. The spices should be cooked carefully on low heat so they do not burn. A little water may be added if the mixture becomes too dry. Cooking the

spices properly is important because it enhances the taste and color of the curry. The masala becomes thick and oily when it is fully cooked.

The marinated chicken pieces are then added into the pan. The chicken should be mixed well with the masala so that every piece is coated with spices. The chicken is cooked on medium heat for several minutes while stirring occasionally. Gradually, the chicken changes color and releases its own juice. This process allows the meat to absorb all the flavors of the spices. Some people fry the chicken for a longer time to achieve a deeper flavor.
